- İki adet hemostatik veya ligatür pens yardımı ile sünnet derisi çan şeklindeki koruma çubuğu üzerine çekilir ve glans yuvaya yerleştirilir.
 - Bu şekilde, kelebek somun sıkılarak, olabildiğince kapama sağlanır. Böylelikle sünnet derisi halka şeklinde sıkıştırılır. Sünnet derisi bistüri yardımı ile sıkma çemberinin hemen kenarından kesilir.
 - Sünnet çanı kanamayı önlemek amacı ile bir kaç dakika bekletilir. Özellikle frenular arter damarının büyük olması ve kesilmesi gerektiği durumlarda dikiş takımı hazır bulundurulmalıdır.
 - Tanımlanan metodun avantajı, küçük ölçü dokunun bıraktığı yara izinin estetik olarak uygun olmasıdır.
-
- Foreskin is pushed over the bell-shaped protection rod with the help of two hemostatic or ligature forceps and the glans is placed into cavity on the rod.
 - In this position, wing nut is tightened as close as possible for guaranteeing annular copression on the foreskin. Then foreskin is cut off with scalpel, right next to the compression ring.
 - The circumcision clamp is kept in compressed position for few minutes for avoiding bleeding. In case of large vein of frenular artery is cut artery is cut through, the ligature set should be kept ready.
 - The advantage of the method described is aesthetically favorable scar after operation.
